

EurOzone (2000-2001)

Summary

In this project provisions for ozone depleting substances as demanded by the Regulation on ozone depleting substances, Reg. (EC) 2037/2000, were controlled. Main focus was laid on the illegal trade which was especially important in countries with big harbours as well as on the leakages from cooling installations and safe removal of ozone depleting substances.

Although significant differences exist between the Member States concerning the support of the phase out process a good progress was made towards the phase out of ozone depleting substances all over Europe. The illegal import of Chlorinated/Fluorinated Carbons appeared to have declined during the second half of the 1990ies.
